Finals Practice Task #1: SQL workbench introduction

This practice task introduces SQL workbench and how to clean a CSV dataset.

The screenshot displays the MySQL Workbench interface. The left sidebar shows the 'Schemas' tree with 'shipment_db' selected. The main editor contains a SQL query for cleaning the 'shipments_tbl' table. The query includes comments and SQL statements to remove leading/trailing spaces, standardize case, format dates, and validate entries.

```
1 -- remove leading and trailing spaces
2 SELECT shipment_id,
3       proper_case(trim(origin_warehouse)) as origin_warehouse,
4       proper_case(trim(destination_city)) as destination_city,
5       proper_case(ucase(destination_state)) as destination_state,
6       proper_case(trim(carrier)) as carrier,
7       -- change DATE format for ship date and delivery date
8       str_to_date(delivery_date, '%Y-%m-%d') as delivery_date,
9       str_to_date(ship_date, '%Y-%m-%d') as ship_date,
10
11 -- validate date entries for delivery and shipment
12 datediff(delivery_date, ship_date) as No_of_days_delivered,
```

The 'Result Grid' shows the output of the query, displaying columns: shipment_id, origin_warehouse, destination_city, destination_state, carrier, delivery_date, ship_date, No_of_days_delivered, delivery_status, valid_weight, and row_num. The results list 24 rows of shipment data.

shipment_id	origin_warehouse	destination_city	destination_state	carrier	delivery_date	ship_date	No_of_days_delivered	delivery_status	valid_weight	row_num
